

## 000-086 IBM System

### IBM System x High Performance Servers Technical Support V4

**Practice Exam:** 000-086 Exams

**Exam Number/Code:** 000-086

**Exam Name:** System x High Performance Servers Technical Support V4

**Questions and Answers:** 41 Q&As

( [IBM System](#) )

Exam : [000-086](#)

"System x High Performance Servers Technical Support V4", also known as 000-086 exam, is a IBM certification. With the complete collection of questions and answers, TestInside has assembled to take you through 41 Q&As to your 000-086 Exam preparation. In the 000-086 exam resources, you will cover every field and category in IBM Certification helping to ready you for your successful IBM Certification.

Quality and Value for the 000-086 Exam TestInside Practice Exams for IBM **IBM System** Certification 000-086 are written to the highest standards of technical accuracy, using only certified subject matter experts and published authors for development.

#### **TestInside provide the professional Q&A.**

1. We offer free update service for three month.

After you purchase our product, we will offer free update in time for three month.

2. High quality and Value for the 000-086 Exam.

000-086 simulation test questions, including the examination question and the answer, complete by our senior IT lecturers and the IBM System product experts, included the current newest 000-086 examination questions.

3. 100% Guarantee to Pass Your IBM System exam and get your IBM System Certification.

If you do not pass the IBM Certification 000-086 exam (System x High Performance Servers Technical Support V4) on your first attempt using our TestInside testing engine and pdf file, we will give you a FULL REFUND of your purchasing fee.

#### **use TestInside 000-086 Q&A ensure you pass the exam at your first try.**

TestInside professional provide IBM System 000-086 the newest Q&A, completely covers 000-086 test original topic. With our complete IBM System resources, you will minimize your IBM System cost and be ready to pass your 000-086 tests on Your First Try, 100% Money Back Guarantee included!

[IBM 000-086](#) Test belongs to one of the IBM System certified test, if needs to obtain the IBM System certificate, you also need to participate in other related test, the details you may visit the [IBM System](#) certified topic, in there, you will see all related IBM System certified subject of examination.

#### **TestInside Testing Engine Features**

Comprehensive questions and answers about 000-086 exam

000-086 exam questions accompanied by exhibits

Verified Answers Researched by Industry Experts and almost 100% correct

000-086 exam questions updated on regular basis

Same type as the certification exams, 000-086 exam preparation is in multiple-choice questions (MCQs).

Tested by multiple times before publishing

Try free 000-086 exam demo before you decide to buy it in Test-Inside.com.

Note: This pdf demo do not include the question's picture.

Exam : IBM 000-086

Title : System x High Performance Servers Technical Support V4

1. A retail customer is experiencing a performance bottleneck. The server is performing sequential I/O requests with large block sizes of 64KB. Improving which of the following storage subsystem characteristics has the biggest impact on this bottleneck?

- A. Seek Time
- B. Drive RPM
- C. Data Transfer Rate
- D. Cache

Answer: B

2. A customer has a large facility that has its offices at one end and a manufacturing floor at the other. The company is looking to implement new equipment that requires access to the company's SAN that is over 2.4 kilometers away. Which of the following solutions will satisfy this requirement?

- A. Install a longwave SFP in the office SAN switch and string a multimode fibre from the office to the manufacturing floor.
- B. Install a longwave SFP in the office SAN switch and string a singlemode fibre from the office to the manufacturing floor.
- C. Install a shortwave SFP in the office SAN switch and string a multimode fibre from the office to the manufacturing floor.
- D. Install a shortwave SFP in the office SAN switch and string a singlemode fibre from the office to the manufacturing floor.

Answer: B

3. A manufacturing customer is considering the x3850 to take advantage of hot-add memory. Which of the following questions should be asked to determine if memory can be added without taking the server offline?

- A. How much physical memory is going to be installed
- B. Will the PC3200 RDIMM's be implemented in groups of four
- C. Will the full 64GB mirrored memory capacity be implemented
- D. Will the application run in 32, 64 bit or mixed environment

Answer: A

4. A small bio-technical company is interested in implementing a 32-node Linux cluster. They have developed their own software that allows all of the nodes to work on the same problem at the same time. The application requires messages to be passed between the nodes. Each node will require access to a shared storage pool of around 500GB. Which of the following questions will identify the inter-process communication (IPC) networking requirements

- A. Is the network capable of using 4x or 12x Infiniband
- B. Will remote shell (rsh) be enabled for remote process initiation
- C. What are the data transfer requirements for inter-node message passing
- D. What type of data is being sent across the inter-process communication network

Answer: C

5. A Modular System specialist monitors a customer's server that has poor performance. The customer is running an x3850 with a ServeRAID 8i controller with write-back cache turned on and 6 drives in a RAID-5 array. It is a mission-

critical server and must have a redundant storage system. Performance tests indicate that the Average Disk secfTransfer exceeds 20 ms. Which of the following is the lowest-cost method to increase the throughput?

- A. Disable the ServRAID cache
- B. Change the RAID level to 10
- C. Change the cache level to Write Through
- D. Increase the number of read/write heads

Answer: C

6. Which of the following are functions of the Xcel4v cache?

- A. Memory mirroring
- B. Approximately 5% boost in performance
- C. Reduce traffic on the front side bus in a single node server
- D. Provides a 2:1 compression ratio for data in cache

Answer: C

7. A manufacturer is deploying a custom application written to take advantage of multithreading features and run in a Windows environment. The customer wants to know which processor family will run the application most efficiently. Which of the following questions will provide the required information?

- A. What is the application's maximum processor scaling capability
- B. Will the application run faster with Microsoft OLTP technology
- C. Will the application benefit from larger disk cache and swap space
- D. Can the application use Hot Swap Processor, Memory, and PCI-X technology

Answer: A

8. Which of the following is provided by attaching to a NAS storage system through redundant NICs?

- A. High availability (with failover)
- B. File sharing on the storage system
- C. Greater number of LUNS available on the same storage system
- D. Lower power consumption

Answer: A

9. A finance company wants a solution to consolidate their storage using the DS4000 series and implement a disaster recovery solution across two data centers linked by fibre to duplicate the production environment. The customer requires a solution with the least amount of system administration. Which configuration would provide the best solution?

- A. Implement one DS4800 at each location connected to the fibre link and use Remote Volume Mirror (RVM).
- B. Implement a DS4800 at each location using FlashCopy option and use host based replication to synchronize the sites.
- C. Implement a switched fabric using redundant SAN switches with a DS4800 using RVM option at each location.
- D. Implement a switched fabric using SAN switches connected via ISL with a DS4800 using RVM option at each location.

Answer: D

10. The Integrated Adaptec AIC-9410 serial attached SCSI (SAS) controller in the x3800, x3850, and x3950 supports which of the following RAID types?

- A. RAID 0, RAID 1, and RAID 5
- B. RAID 0, RAID IE and RAID 5EE
- C. Integrated controller does not support RAID
- D. RAID 0, RAID 1, RAID IE, RAID 5, RAID 5E, RAID 5EE, RAID 5EEE, and RAID 60

Answer: C
