

000-910 Solutions Expert

IBM managing and optimizing informix dynamic server databases

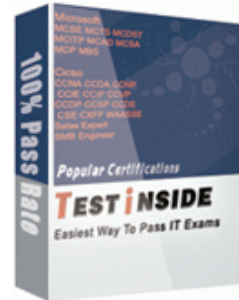

Practice Exam: 000-910 Exams

Exam Number/Code: 000-910

Exam Name: managing and optimizing informix dynamic server databases

Questions and Answers: 140 Q&As

([Solutions Expert](#))

Exam : [000-910](#)

"managing and optimizing informix dynamic server databases", also known as 000-910 exam, is a IBM certification. With the complete collection of questions and answers, TestInside has assembled to take you through 140 Q&As to your 000-910 Exam preparation. In the 000-910 exam resources, you will cover every field and category in IBM Certification helping to ready you for your successful IBM Certification.

Quality and Value for the 000-910 Exam TestInside Practice Exams for IBM **Solutions Expert** Certification 000-910 are written to the highest standards of technical accuracy, using only certified subject matter experts and published authors for development.

TestInside provide the professional Q&A.

1. We offer free update service for three month.

After you purchase our product, we will offer free update in time for three month.

2. High quality and Value for the 000-910 Exam.

000-910 simulation test questions, including the examination question and the answer, complete by our senior IT lecturers and the Solutions Expert product experts, included the current newest 000-910 examination questions.

3. 100% Guarantee to Pass Your Solutions Expert exam and get your Solutions Expert Certification.

If you do not pass the IBM Certification 000-910 exam (managing and optimizing informix dynamic server databases) on your first attempt using our TestInside testing engine and pdf file, we will give you a FULL REFUND of your purchasing fee.

use TestInside 000-910 Q&A ensure you pass the exam at your first try.

TestInside professional provide Solutions Expert 000-910 the newest Q&A, completely covers 000-910 test original topic. With our complete Solutions Expert resources, you will minimize your Solutions Expert cost and be ready to pass your 000-910 tests on Your First Try, 100% Money Back Guarantee included!

[IBM 000-910](#) Test belongs to one of the Solutions Expert certified test, if needs to obtain the Solutions Expert certificate, you also need to participate in other related test, the details you may visit the [Solutions Expert](#) certified topic, in there, you will see all related Solutions Expert certified subject of examination.

TestInside Testing Engine Features

Comprehensive questions and answers about 000-910 exam

000-910 exam questions accompanied by exhibits

Verified Answers Researched by Industry Experts and almost 100% correct

000-910 exam questions updated on regular basis

Same type as the certification exams, 000-910 exam preparation is in multiple-choice questions (MCQs).

Tested by multiple times before publishing

Try free 000-910 exam demo before you decide to buy it in Test-Inside.com.

Note: This pdf demo do not include the question's picture.

Exam : IBM 000-910

Title : Managing and Optimizing Informix Dynamic Server Databases

1. What is the system catalog?

- A. A catalogued set of index criteria.
- B. A set of tables created by the administrator
- C. A set of tables that manage the operating system
- D. A set of tables that describe the structure of the dataabase.

Answer: A

2. Which isolation level does a database without logging default to?

- A. committed read
- B. dirty read
- C. mode ANSI
- D. repeatable read

Answer: B

3. Which three can be locked?

- A. a row
- B. a page
- C. a column
- D. a key
- E. shared memory

Answer: ABD

4. With database logging, where are transaction records first placed?

- A. in a temporary database table.
- B. in the logical log buffer.
- C. in the primary chunk
- D. in the physical buffer.

Answer: B

5. What does the ATTACH clause in the ALTER FRAGMENT statement do?

- A. It adds extents to a table.
- B. It attaches a raw data file to a table.
- C. It combines two unfragmented tables.
- D. It combines two fragmented tables.

Answer: C

6. Disk space for a table is allocated in one or more units called what?

- A. tblspaces
- B. extents
- C. blobs
- D. chunks

Answer: B

7. In which two situations would you use a round robin fragmentation strategy?

- A. When all fragments must be scanned.
- B. To create uneven data distributions.
- C. When queries perform sequential scans and you have little information about the data being stored.
- D. When tables are accessed with a high degree of selectivity.

Answer: AC

8. What are four valid logical and relational operators that can be used with expression-based distribution?

- A. AND
- B. IN
- C. <
- D. >=
- E. !=
- F. MATCHES

Answer: ABCD

9. Which two happen when the ALTER FRAGMENT statement is run?

- A. Transaction logging, if present, is suspended.
- B. The table is locked until the statement is completed.
- C. The database is locked until the statement is completed.
- D. For databases with logging, the statement executes as a single transaction.

Answer: BD

10. Which fragments an index by expression?

- A. FRAGMENT BY EXPRESSION col_1
- B. FRAGMENT BY EXPRESSION col_2 > = 10000 IN dbspace1
AND col_2 < 10000 IN dbspace2
- C. FRAGMENT BY EXPRESSION col_1 < 10000
AND col_2 IN dbspace2
- D. FRAGMENT BY EXPRESSION col < 20000 IN dbspace1, col >= 20000 IN dbspace2

Answer: D

11. Which statement correctly changes the next extent size?

- A. ALTER TABLE customer MODIFY NEXT SIZE 300
- B. ALTER TABLE customer MODIFY NEXT EXTENT SIZE 300
- C. ALTER TABLE customer MODIFY EXTENT SIZE 300
- D. ALTER TABLE customer NEXT SIZE 300

Answer: A

12. What is database administration NOT concerned with?

- A. indexing
- B. creating tables
- C. accessing data
- D. application building

Answer: D

13. What is a chunk when using raw devices?

- A. a contiguous unit of disk space.
- B. a dynamic unit of disk space.
- C. a location in shared memory
- D. a data table.

Answer: A

14. Given that the SQL statement SET LOCK MODE TO WAIT has not been executed, if a statement attempts to alter a row that another process has locked, what happens?

- A. The lock is released.
- B. An error is returned.
- C. The row is immediately updated.
- D. The row is updated after the lock is removed.

Answer: B

15. Which two types of fragmentation are allowed in a CREATE TABLE statement?

- A. disk striping
- B. dbspace
- C. indexing
- D. round robin
- E. mirroring
- F. tblspace
- G. sorting
- H. expression

Answer: DH

16. Where are table spaces (tblspaces) created?

- A. in dbspaces
- B. in pages
- C. in extents
- D. in chunks

Answer: A

17. What are three advantages of fragmentation?

- A. higher availability.
- B. reduced disk space requirements.
- C. parallel scans are possible with PDQ.
- D. finer granularity of archives and resources.

Answer: ACD

18. Why is a hash function advantageous in an expression-based distribution?

- A. Because it creates an even distribution of data.
- B. Because it creates an uneven distribution of data.
- C. Because it does not do expression testing.
- D. Because it places all data in one dbspace.

Answer: AB

19. Where is fragment information stored?

- A. in the system catalog tables.
- B. in the physical logs.
- C. in the reserved pages.
- D. in the first page of the database tblspace.

Answer: A

20. Which statement fragments a table as round robin?

- A. FRAGMENT AS ROUND ROBIN IN dbspace1, dbspace2.
- B. FRAGMENT TABLE BY ROUND ROBIN IN dbspace1, dbspace2.
- C. FRAGMENT BY ROUND ROBIN IN dbspace1, dbspace2.
- D. FRAGMENT BY ROUND ROBIN

Answer: C
