Answer: C

13. EIGRP applies the principle of Feasible Successor (FS) in resolving a new path to a lost route. What statement regarding the FS is correct?

- A. Information is stored for the FS as part of the Link-State Routing updates forwarded for EIGRP.
- B. EIGRP estimates the FS from each neighbor for each network after an exchange of database information during the normal update process. It uses this information for path selection when a route is lost.
- C. When EIGRP is notified that a route is lost, it will always send requests to each neighbor for ways to reach the lost route. The neighbor that returns the best path will qualify as the FS.
- D. EIGRP nominates a central router as the FS for all lost routes during configuration.

Answer: B

14. A router is set to boot from flash, but cannot find boot commands in the configuration. Also, valid files do not exist in the default flash device. The router will:

- A. Boot from ROM, since there are no valid sources
- B. Try to boot from the network, using a default filename
- C. Terminate the boot process with an error message
- D. Try to boot from the network, then boot from ROM as a backup

Answer: D

15. What technology allows transporting Layer2 attachment circuits over IP-only backbones?

Answer: C

16. OSPF is defined on a Frame Relay interface providing point-to-multipoint connections. The remote neighbors can reach this central site, but are complaining of routing failures between each of the remote sites. The central router has all the routes for each remote site. Based on this information, what can be diagnosed as the biggest potential problem?

- A. An over-subscribed Frame Relay switch will cause some packet loss.
- B. There are problems in the use of OSPF Authentication.
- C. There is an incorrect selection of the Designated Router.
- D. There is an incorrect DLCI assigned on a point-to-point sub-interface.

Answer: C

- B. 1520
- C. 1524
- D. 1526

Answer: D

19. Click the Exhibit button. PE1 and PE2 are connected to the MPLS cloud. All MPLS labels from PE1 and PE2 are working. Observing the shown topology, will this scenario work?

- A. This scenario will not work because Gigabit Ethernet can't be connected to FastEthernet over MPLS.
- B. This scenario will work because the issues concerning Gigabit and FastEthernet over MPLS with default behavior should not make any difference.
- C. This scenario will not work because Gigabit usually has MTU over 9000 and FastEthernet 1500.
- D. This scenario will not work because one side has dot1q header and another side is in port mode.
- E. This scenario will work by configuring PWE Class using the Interworking feature. By default, the MTU on each side is 1500, so this is an acceptable solution.

Answer: E

- B. Call Proceeding
- C. Connect
- D. USER Information
